

GVT

ENGLISH: Directions for use

VELUX®

Opening window

Open window by turning handle 90°. Open sash completely (to 95° position). The safety catch at the top is locked automatically, thus preventing the sash from closing by itself.

Closing window

To close the sash hold the handle with one hand as shown while releasing the safety catch. Close the sash and turn handle downwards 90° to lock it to the striking plate.

Ventilation position

The sash may be secured in three different ventilation positions.

Minimising condensation

Particularly in rooms with high levels of humidity, condensation can form on the inner pane of the window. This can be minimised by airing the room frequently.

Cleaning the window

The surface can be cleaned with ordinary household cleaners.

Cleaning the flashing

Leaves and other debris should be removed from the flashing around the window to allow rainwater to flow freely.

Snow and ice

It is important to make sure that water can always drain off from the window and surrounding gutters. Snow and ice should therefore be removed from the area on and around the window in the same way as leaves and other debris should be removed from flashing and gutters to allow melt water to flow freely.
